Defining the Science Agenda

We need a scientific foundation for the [holistic] integration of environmental and socioeconomic data and models in public policies...

Build

Approach: Energy Systems Analysis

✍ Energy is the availability of energy of one kind that is used up in transformations directly and indirectly to make a product or service.

✍ Energy of something is found by summing the inputs from the network of connecting inputs.

ENERGY: 1 kcal

180 kcal
($7.5 \times 10^5 \text{ J}$)

1000kcal
($4.2 \times 10^6 \text{ J}$)

120,000 kcal
($5 \times 10^8 \text{ J}$)

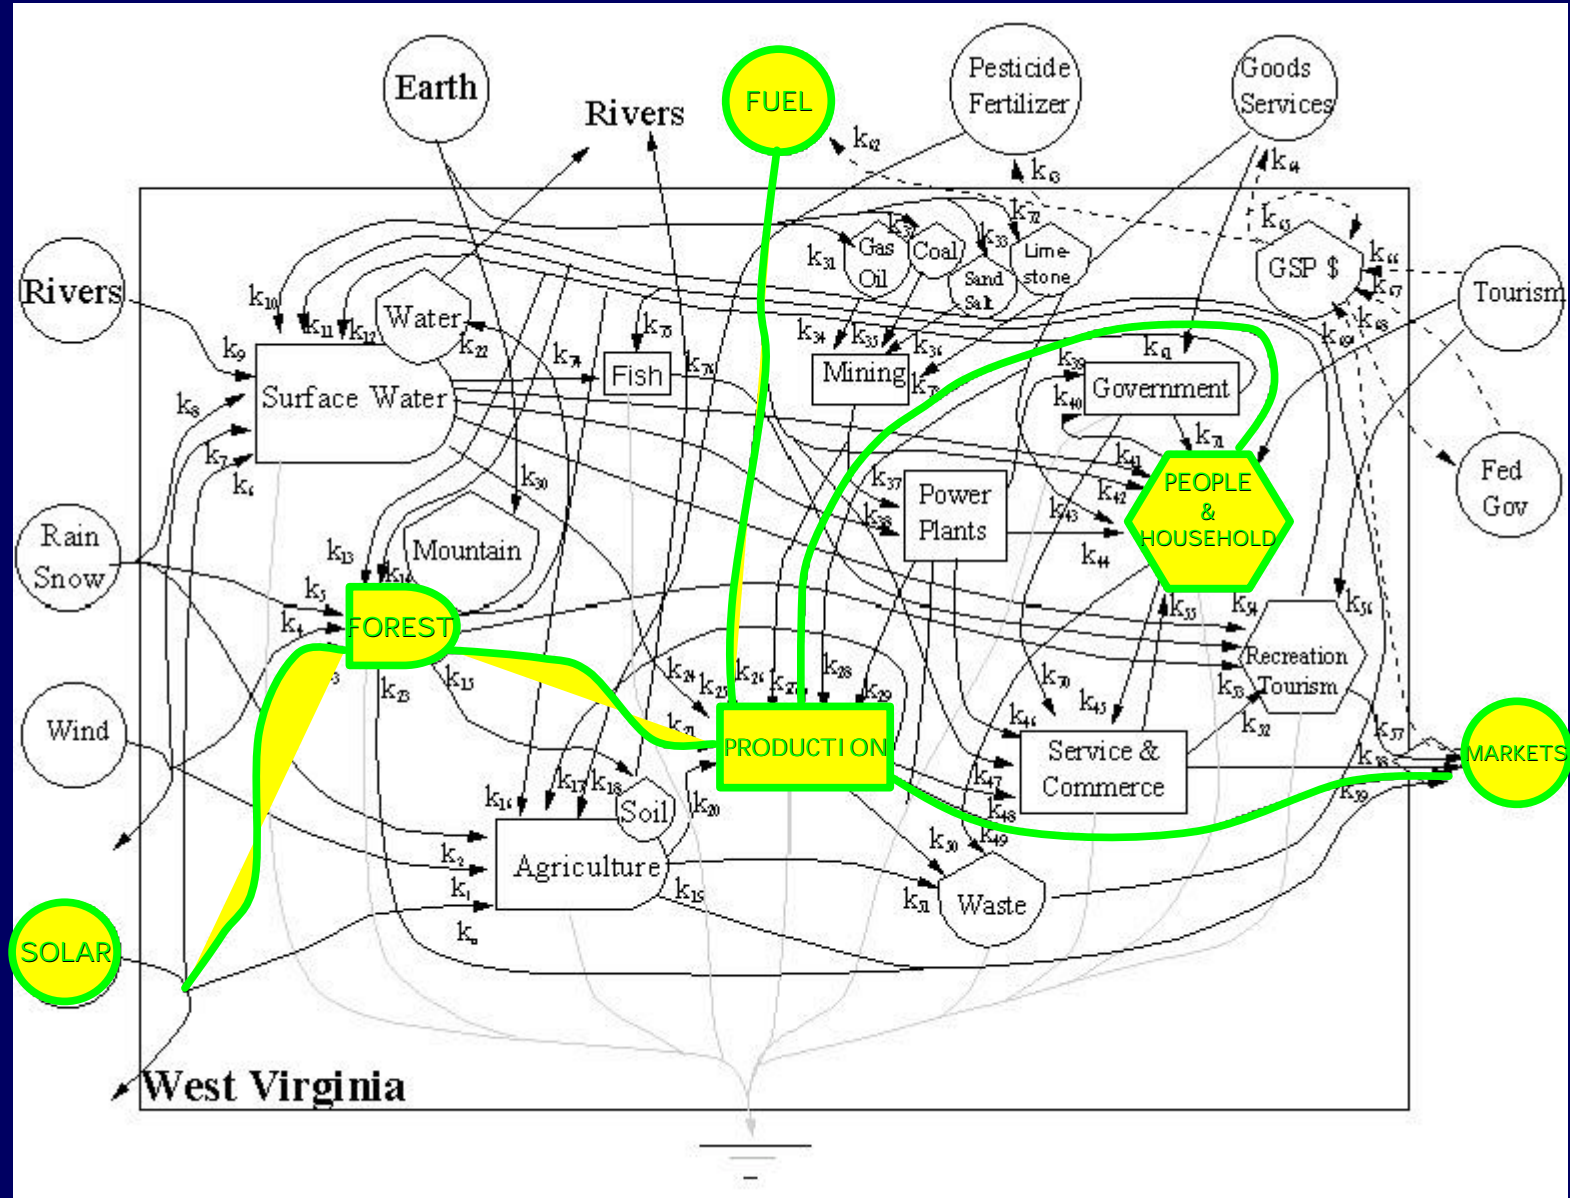

EmERGY:

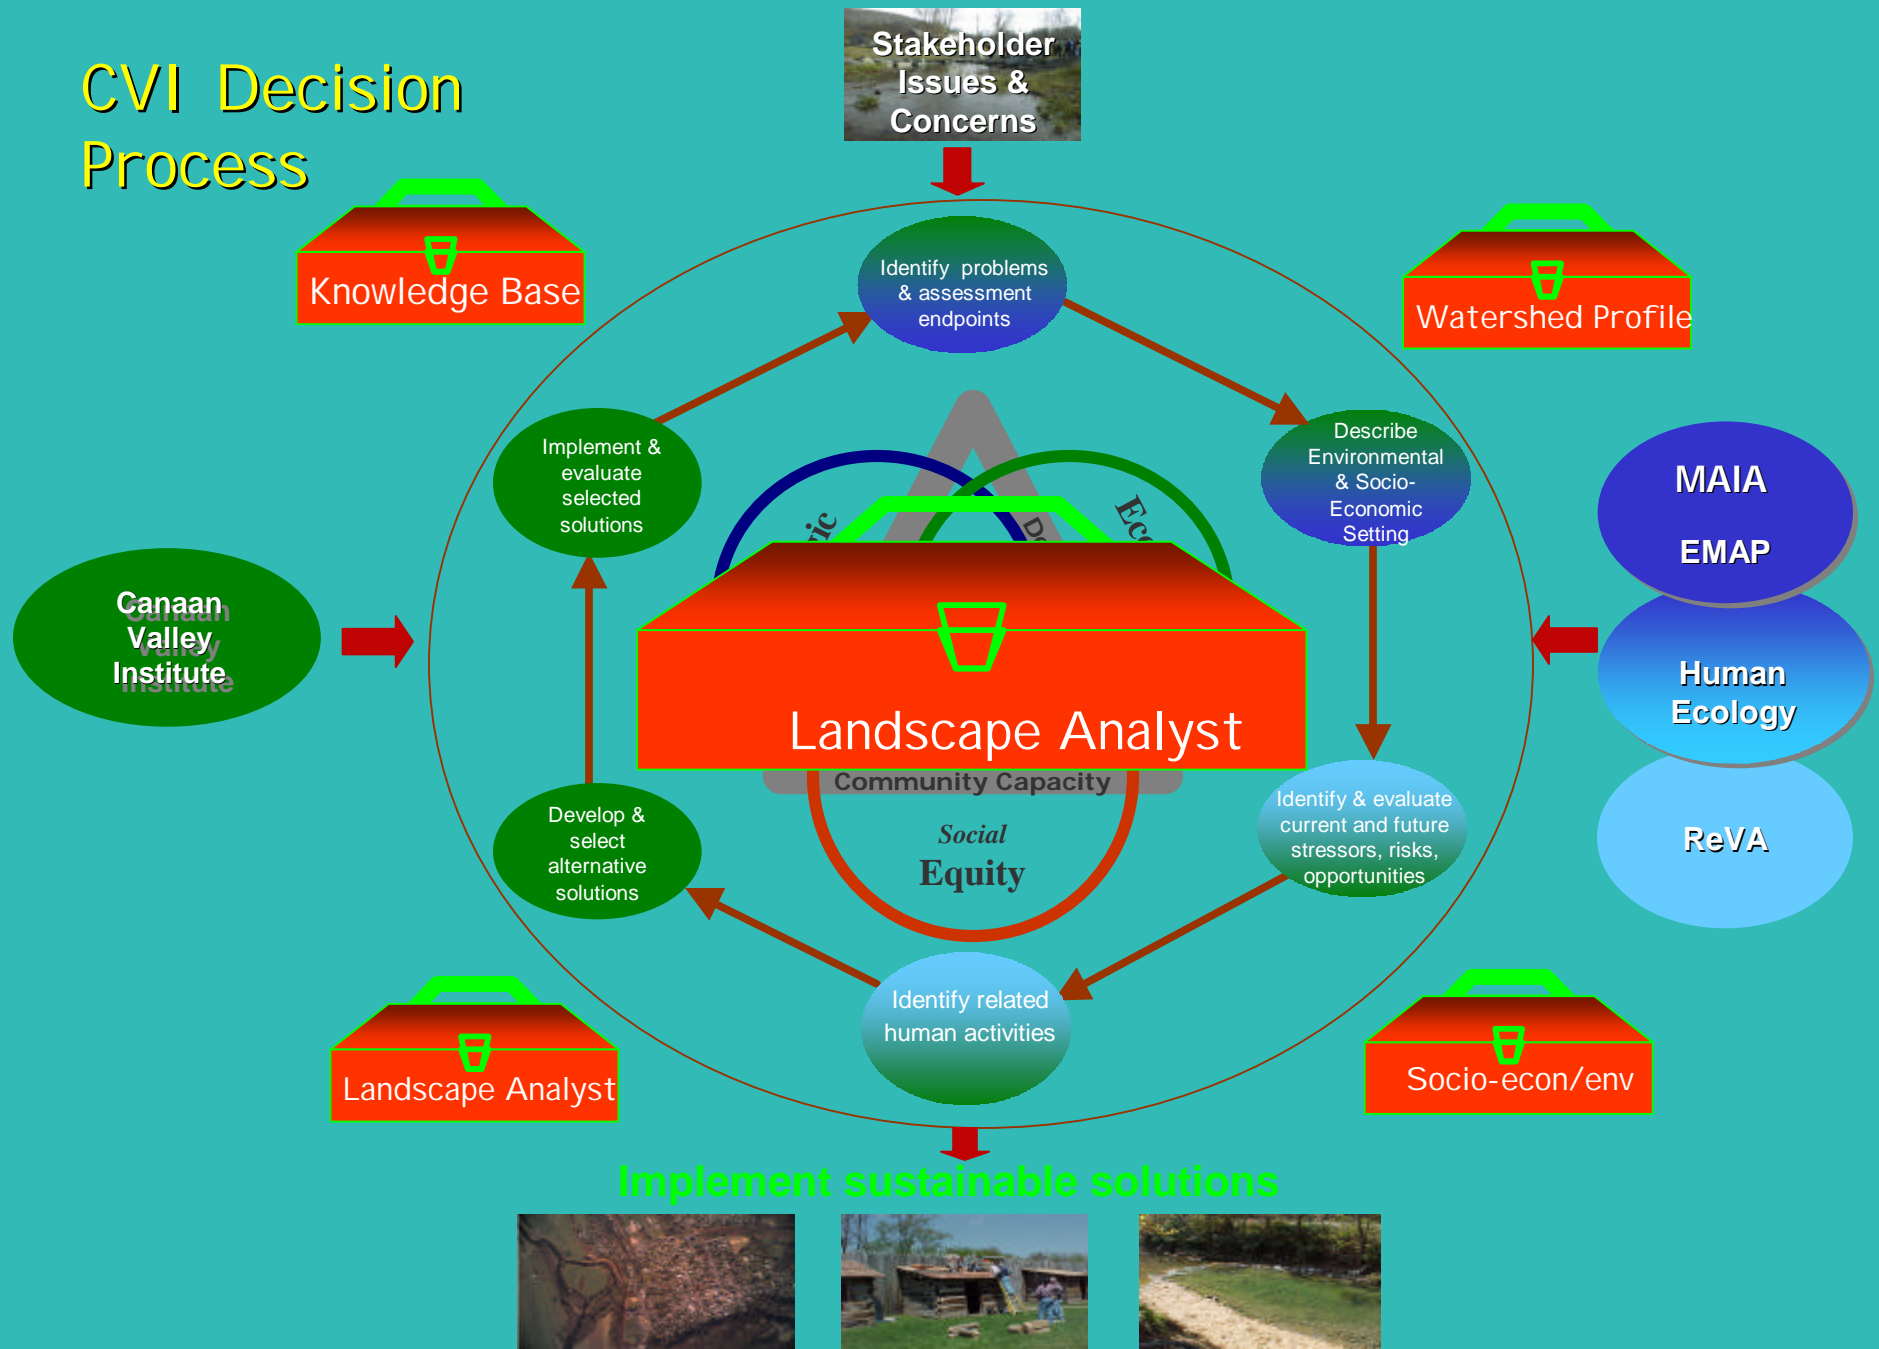

$225 \times 10^7 \text{ seJ/yr}$

$235 \times 10^{10} \text{ seJ}$

Cerulean Warbler – WV-GAP Distribution Mapping

Example

Input – Range Map

Habitat Types Associated with Species:

- Surface water
- Floodplain forest
- Cove hardwood forest
- Diverse/mesophytic hardwood forest
- Hardwood/conifer forest
- Oak dominant forest
- Mountain hardwood forest

Input – Habitat Associations

Result - Modeled Distribution

Cerulean Warbler Habitat Model

GIS datasets

Derived data layers

Model criteria

DEM

Slope..... $\leq 61\%$ and $\geq 35\%$

Moisture index..... < 27 or < 52

Surface curvature..... Convex

Drainage area..... ≥ 9 and ≤ 45

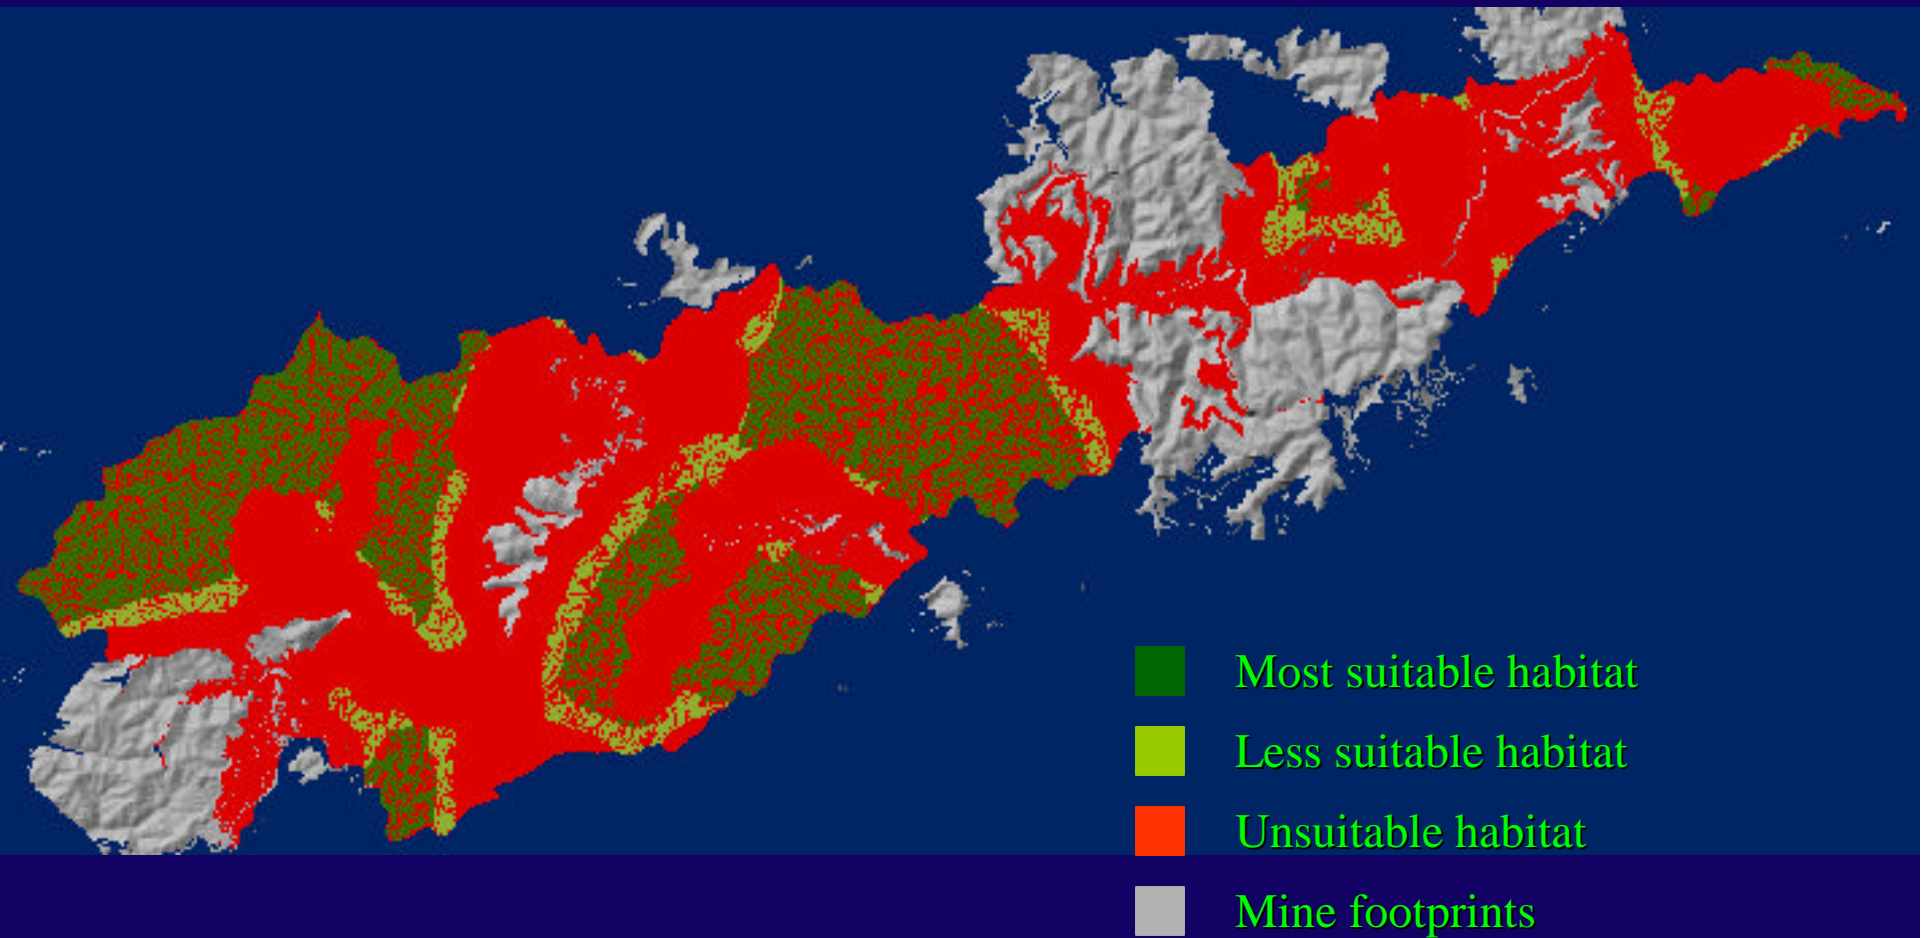

Multi-spectral
satellite imagery

Forest cover.....

Deciduous or
mixed forest

Cerulean Warbler Suitable Habitat 1999 Land cover + Future mine permits

Case Example 2: Sprawl

- Predicting sprawl- based on factors of impedance and growth
- Managing sprawl: regional, local, site-specific

Potential Growth- High Density Areas

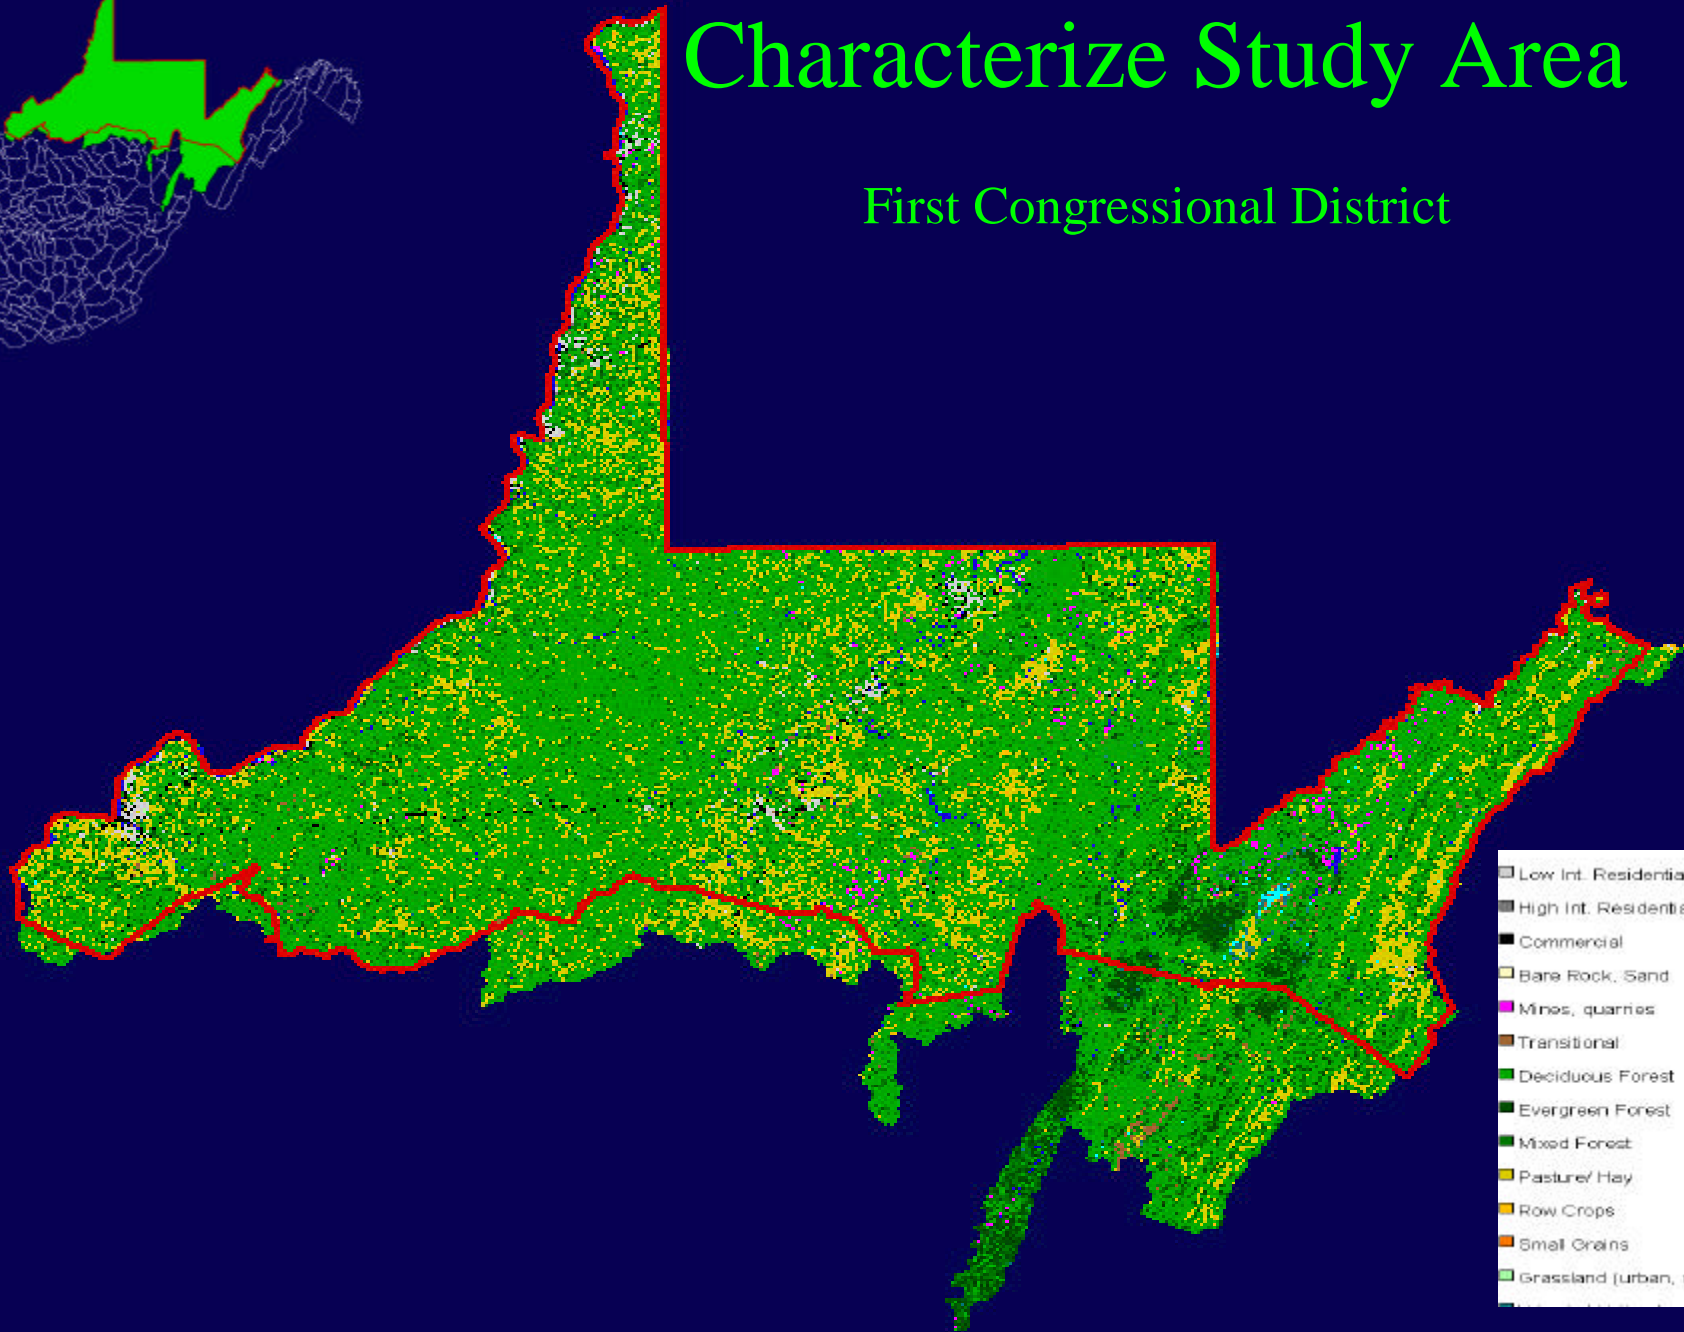

Regional Strategic Application

Hypothetical Goals:

- Characterize and understand the region
- Develop sustainable growth corridors
- Preserve or improve regional ecological condition
- Focus regulatory and non-regulatory resources on most pressing environmental conditions
- Measure success
- Involvement of local stakeholders

alternative
solutions

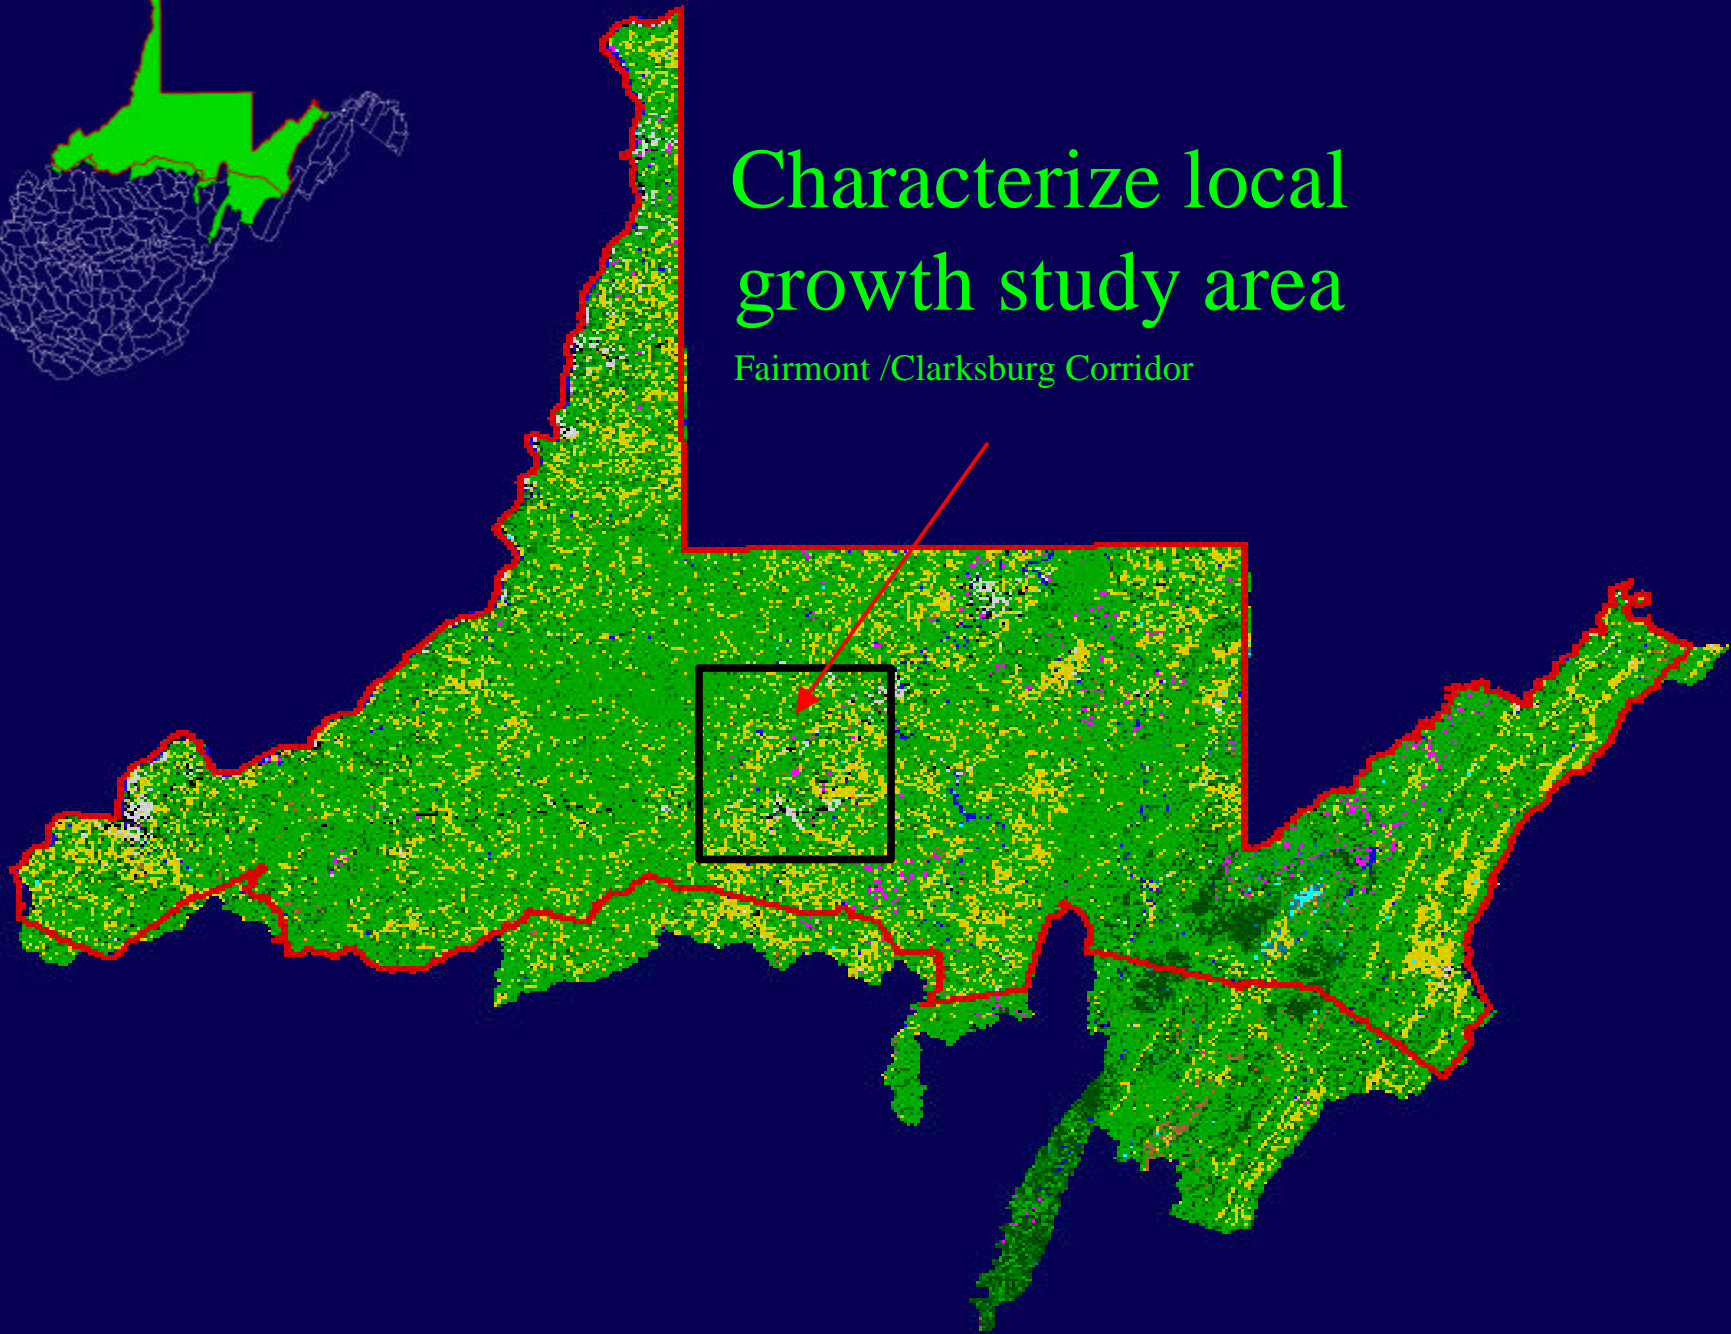

Implement &
evaluate
selected
solutions

Objectives:

- Identify site building constraints
- Identify site specific ecologically significant areas
- Apply appropriate buffers
- Identify and institute mitigation restoration

Characterize local growth study area

Fairmont /Clarksburg Corridor

Physical and Economic Development Constraints

- Steep slopes ($>25\%$)
- Previously developed land (e.g., residential, commercial, mined lands)
- Limited access (few roads)

Environmental Development Constraints

- Riparian buffer zones (30m - 60m)
- Regulated land uses (e.g., wetlands)
- Ecologically valuable forests

Characterize local growth study area

Fairmont /Clarksburg Corridor

Fairmont / Clarksburg

Developable Land in Ecologically Poor Condition

Development Potential

- Undevelopable
- Developable
- Developable and Ecologically Poor
